Author Index to Volume 31

In this index are listed names of authors and titles of their articles and notes. Abstracts or titles of papers read at meetings are designated by the letter (A) after the number of the page on which the abstract or title may be found. The symbol (L) after an entry signifies a Letter to the Editor.

Adams, Carl E. Review of *Fundamentals of acoustics*—812
—— Review of *Principles of transistor circuits (second edition)*—309
Adams, E. E., R. J. Ayres and H. T. Scales. Interferometric studies of ultrasonic velocity and absorption in mixtures of gases 229(A)
Ahlgren, Andrew. Physics instruction at Maine Township East—745(A)
Akers, L. K., R. T. Overman and L. D. Roberts. Summer institute in modern physics—73(A)
Alexander, D. Murray. A comment on teaching wave motion—229(A)
Allen, Donald (see Oppenheimer, Frank)—149(A)
Allen, Mildred and Erwin J. Saxl. An experiment offering varied experience: conductivity changes of a germanium crystal under tension and illumination—837
Anderson, M. F. Light emission from a helium microwave plasma.—71(A)
Anderson, O. L. (see Runk, R. B.)—915
Anderson, William T. Review of *Advances in electronics and electron physics, vol. 15*—64
Andrews, C. L. Report of the membership committee for 1962—551
Andrews, D. E., J. E. Thomas, P. W. Schmidt. A small angle x-ray scattering study of Thoria Sols—817(A)
Armstrong, Baxter H. and Edwin A. Power. Acceptable solutions and boundary conditions for the Schroedinger and Dirac equations—262
Armstrong, H. L. Comments on vectorial and geometrical solutions to problems in mechanics—137(L)
—— Improvements in an experiment on diffraction of light by sound—132
—— Review of *Concise physics for ancillary degree students*—145
—— Review of *Laboratory physics, third edition*—70
Ayres, R. J. (see Adams, E. E.)—229(A)

Bacigalupi, Robert J. (see Spakowski, Adolph E.)—807
Badar, Lawrence (see Deall, Louis)—184
Bailey, John M. Review of *Electron transport in metals*—813
Baldwin, T. O. and C. W. Tompson. Determination of the characteristic temperature and the Debye-Waller factor by x-ray methods—817(A)
Ballard, Stanley S. AAPT High School Awards Program—141
Barker, W. A. (see Jeck, R. K.)—817(A)
Barlow, Carl A., Jr. Classical distribution of a mutually interacting ensemble—247
Barnes, George. Section news: Northern California section—229
—— Section news: Northern California section—470
Barnes, James. Section news: Michigan section—403
Barr, E. Scott. Anniversaries in 1963 of interest to physicists—75
—— A History of physics course for undergraduate students—73(A)
—— A neglected resource for the history of physics—894(A)
Bartunek, Paul F. The Regional Counselor program in Colorado—150(A)
—— The regional counselor program in Colorado—744(A)
Bayes, Jane Higginbotham and William T. Scott. Billiard-ball collision experiment—197
Beach, J. L. (see Young, T.)—313(A)
Beams, Jesse W. Film review: *Short time intervals*—553
—— Film review: *Time and clocks*—552
Beatty, Millard F. Vector representation of rigid body rotation—134
Beckel, Charles C. The Georgetown general physics course for physical science majors—743(A)
Beckel, Charles L. A paradox contest for first year college physics students—550(L)
Bekefi, G. (see Brown, Sanborn C.)—637
Bell, R. M. Some experiments in radio astronomy—895(A)
Bernal G, Enrique (see Donally, Bailey L.)—779
Berry, Edwin X The nonconservation of angular momentum of a weight on a string—304(L)
Bertram, H. Neal. Absolute viscosity of water—214
Biondi, M. A. (see Brown, Sanborn C.)—637
Biser, Roy H. An undergraduate research project: photon diffraction—29
Blitzer, Leon. Resource letter SO-1 on the kinetics and dynamics of satellite orbits—233
—— Review of *The tides and kindred phenomena in the solar system*—70
Blüh, Otto. Collective experiments in the physics laboratory—73(A)
Blume, R. J. Demonstration of nuclear magnetic resonance in cobalt with a "grid dip" meter—58
Boekelheide, Irving. Report on the Denver Curriculum Conference—230(A)
Bork, Alfred M. Maxwell, displacement current, and symmetry—854
—— A physics independent study course with computer—364
Bowe, Joseph C. Electron velocity distributions in gases—905
Braden, Patrick O. Van Allen belt demonstration—459
Brady, J. J. (see Skinner, J. G.)—469(A)
—— (see Darrah, John)—469(A)
Brady, James J. The design and construction of a ruby maser—71(A)
Brehme, Robert W. A geometric representation of Lorentz frames for linearly accelerated motion—517
Briggs, E. V. Stroboflash measurement of the velocity of a bullet—548
Brody, H. A simulated scattering experiment—729
Brown, Frederick L. Film review: *Long time intervals*—553
—— Review of *Forces: PSSC film and excerpt from it*—400
—— Review of *Frames of reference, PSSC film and excerpts I and II*—400
Brown, Gordon M., Alan F. Clark and Philip R. Pluta. Principles of *P–N* junction detectors—19
Brown, J. B. Thermodynamics of a rubber band—397
Brown, R. L. Characteristics of color films—470(A)
Brown, Sanborn C., G. Bekefi, M. A. Biondi, S. J. Buchsbaum, M. B. Gottlieb, R. W. Gould, M. A. Heald, A. Kantrowitz, W. B. Kunkel, C. L. Longmire, H. E. Petschek, R. F. Post, D. J. Rose, P. A. Sturrock, D. R. Whitehouse. Outline of a course in plasma physics—637
—— Review of *The historical roots of the principle of the conservation of energy*—147
Bryant, Howard C. Heat waves and Angström's Method—325
Bryant, L. H. Phase shifting attachment for oscilloscope—471(A)
—— A simple experiment on the impact of falling bodies—229(A)
Buchdahl, H. A. Remark on the eigenvectors of angular momentum operators—829
Buchsbaum, S. J. (see Brown, Sanborn C.)—637
Bugg, W. M. The national science foundation education program at the University of Tennessee—894(A)
Bullen, T. G., F.S.C.H. Apparatus for determining Brewster's angle—302
Burch, D. S. (see Evanson, K. M.)—71(A)
Burling, Richard L. Electromagnetic induction–some pedagogic comments—217

Calvert, James B. Identification of molecular symmetry groups—569
Carlson, B. C. and G. L. Morley. Multipole expansion of Coulomb energy—209

Author Index to Volume 31

In this index are listed names of authors and titles of their articles and notes. Abstracts or titles of papers read at meetings are designated by the letter (A) after the number of the page on which the abstract or title may be found. The symbol (L) after an entry signifies a Letter to the Editor.

AMERICAN JOURNAL OF PHYSICS VOLUME 31, NUMBER 12 DECEMBER 1963

Analytic Subject Index to Volume 31

In this index are listed titles of articles and notes, together with the names of their authors. Classification is based upon analyses of contents of the articles, rather than upon the titles alone. The symbol (A) designates an abstract of a paper read at a meeting, (L) designates a Letter to the Editor. To facilitate reference to any desired subject, this index is divided into sections arranged alphabetically. The titles of these sections are as follows:

Accelerators
Acoustics (see Sound)
American Association of Physics Teachers
Apparatus, demonstration
Apparatus, general
Apparatus, laboratory
Astronomy and astrophysics
Atmospheric physics and meteorology
Audio-visual materials and methods
Biophysics
Books
Chemical physics
Commission on College Physics
Computers
Conferences and institutes
Cosmic rays
Cosmology
Courses
Demonstrations
Department administration, maintenance, activities
Editorials
Education: physics and science
Electricity and magnetism
Electronics
Experiments
Films
Fluids: liquids and gases
General physics: educational aspects
General physics: instructional techniques
Geophysics
Heat and thermodynamics
History and biography
Laboratory arts and techniques
Laboratories: construction and equipment
Laboratory: organization and operation
Light
Low temperature physics
Mathematics
Mechanics, classical
Mechanics, quantum
Mechanics, statistical
Microwaves
Modern physics
Nuclear physics
Optics (see Light)
Particles, elementary
Philosophy of science
Physics in foreign lands
Plasma physics
Properties of matter
Relativity and gravitation
Reports, announcement and news
Research
Rockets and satellites
Secondary school physics
Social and economic aspects of science
Solid state physics
Sound
Space physics
Teacher training
Testing: theory and techniques
Textbooks (see Books)
Units, dimensions, and terminology
Waves
X-rays

AAPT

AAPT High School Awards Program, Stanley S. Ballard—141
Back-of-the-envelope calculations, R. Hobart—628(L)
Beyond the call of duty: an editorial of appreciation, Walter C. Michels and W. P. Ganley—474
J. W. Buchta to be editor of *The American Physics Teacher* and executive secretary of AAPT—63
Francis Lee Friedman: Oersted medalist for 1962, Malcolm Correll—475

Insight and taste (response in memory of Francis Lee Friedman), Philip Morrison—477
Jerry Barton Hoag, 1898–1962—888
Minutes of the annual business meeting of the association, Ralph P. Winch—563
Minutes of the annual meeting of the council, Ralph P. Winch—561
New members of the association—74, 150, 231, 316, 404, 471, 559, 635, 745, 817, 896, 948
1963 citations for distinguished service, Frank Verbrugge—454
Regional sections of AAPT, Mario Iona—945
Report of the Editor for the Year 1962—406
Report of the membership committee for 1962, C. L. Andrews—551
Report of the President—1962, Frank Verbrugge—473
Review conference of the commission on college physics, Frank Verbrugge—98
Section news: Appalachian section, Donald C. Martin—230
Section news: Chesapeake section, Robert B. Collagan—230
Section news: Chesapeake section, Robert B. Collagan—742
Section news: Chicago section, R. T. O'Connor—227
Section news: Chicago section, Isador Lerner—744
Section news: Colorado–Wyoming section, William D. Derbyshire—743
Section news: Illinois section, Ralph J. Miller—402
Section news: Indiana section, Richard E. Winn—635

Section news: Southern California section, Harley J. Haden—312
Section news: Southern California section, Harley J. Haden—634
Section news: Western Pennsylvania section (Spring 1962), Andrew J. Kozora—315
Section news: Western Pennsylvania section, Andrew J. Kozora—470
Section news: Western Pennsylvania section, J. Frederick Kunze—895
The student sections of the American Institute of Physics, Donald E. Cunningham—73(A)
Walter C. Michels resumes his position as editor—139

Apparatus, demonstration

A demonstration illustrating the Lorentz transformation, John F. Streib—802
Interference pattern of beats, L. G. Hoxton—794
Magnetic field demonstrations, H. W. Dosso and R. H. Vidal—59
A two-dimensional air table, Harold A. Daw—867

Apparatus, general

Film review: *Short time intervals*, Jesse W. Beams—553
A magnetic resonance demonstration model, John J. Hill—446
A nanosecond light pulser, C. A. Smith and D. O. Wells—469(A)
New physics teaching apparatus using air bearings, Guenter Schwarz and Lewis V. Eckhart—894(A)
A projection T–Y plotter, Rex R. Nelson—635(A)
A swinging thermometer, Peter D. Richardson—395

Apparatus, laboratory

Another version of the conical pendulum, Wallace A. Hilton—58
Apparatus drawings project. Atomic beam apparatus for determining the mean free paths of potassium atoms in argon, Robert C. Marclay—116
Apparatus for determining Brewster's angle, T. G. Bullen, F.S.C.H.—302
Book review: *How to build electronic equipment* by J. Richard Johnson; W. Paul Ganley—222
Book review: *Science model making* by Robert H. Hapwood; Francis T. Worrell—69
Centripetal force apparatus, Hans Weltin—205
Coincidence circuit, Baily Donally—133
Device for measuring sun position, W. M. Pierce—230(A)
An experiment on angular momentum for the introductory laboratory, H. N. Palmieri and Karl Strauch—91
Improvements in an experiment on diffraction of light by sound, J. S. Morgan—735(L)
Insulators for electrometers designed for current measurements of 1×10^{-17} amperes, W. R. Williams—313(A)
A laboratory linear analog for lattice dynamics, R. B. Runk, J. L. Stull, and O. L. Anderson—915
Linear air trough, H. V. Neher and R. B. Leighton—255
Measurement of magnetic susceptibilities by the Quincke method, David B. McLay and Harry M. Johnson—457
Measurement of the velocity of sound in gases, H. J. Wintle—942
Modification of electrolysis apparatus, Donald E. Stenton—139
A neglected method for measuring Curie points, E. V. Smith—731
Peltier heat experiment, R. C. Hanson—469(A)
Poor man's mass spectrometer, John W. Dewdney—932
Rapid bread-boarding of simple electronic circuits, David L. Cone—229(A)
Resonant detection of light pressure by a torsion pendulum in air—an experiment for underclass laboratories, Robert E. Pollock—901
A simple circuit board, Leonard D. Flansburg—624
A simple spring gun; experiments, demonstrations, Michael Rice—89
A simulated scattering experiment, H. Brody—729
Slow-motion moment of inertia apparatus, Hans Weltin—586
A spectroscopic sodium flame, Noojin Walker, Jr.—945(L)
Stroboflash measurement of the velocity of a bullet, E. V. Briggs—548
Student measurement of Fermi energy by positron annihilation, John D. McGervey—713
Undergraduate laboratory timer, B. E. Clotfelter—885
Vertical ballistic pendulum apparatus, Hans Weltin—719

Astronomy and astrophysics

Book review: *Meteorites* by Brian Mason; C. Harrison Dwight—224
Book review: *Physics and astronomy of the moon* edited by Zdeněk Kopal; Allen L. King—143
Book review: *The tides and kindred phenomena in the solar system* by Sir George Howard Darwin; Leon Blitzer—70
Device for measuring sun position, W. M. Pierce—230(A)
Book review: *The distribution and motion of interstellar matter in galaxies* edited by L. Woltjer; Thornton Page—740
Film review: *Measuring large distances*, Richard E. Garrett—738
The homocentric spheres of Eudoxus, Hugo N. Swenson—456
Some experiments in radio astronomy, R. M. Bell—895(A)

Atmospheric physics and meteorology

Analysis of photoionization heating, Douglas C. Hunt—743(A)
Book review: *Radio wave propagation and the ionosphere* by Ya. L. Al'pert; Agnar Pytte—654
Radar observations of the 1 May 1962 squall line, J. M. Pike, R. E. Rinehard, and J. G. Traylor—228(A)
The relation between inflow angle and size in cyclonic storms, J. G. Traylor and J. M. Pike—313(A)

Audio-visual materials and methods

Demonstration model of spherical projection for cubic crystals, Adolph E. Spakowski and Robert J. Bacigalupi—807

Biophysics

Biomathematics training at North Carolina State College, James H. Meade, Jr.—141
The determination of radioactivity in man, Lester L. Skolil—312(A)

Books

Book review: *Absorption spectroscopy* by Robert P. Bauman; C. Harrison Dwight—946
Book review: *Advances in electronics and electron physics*, Vol. 15 edited by L. Marton; William T. Anderson—64

Book review: ABC's *of electronics* by Farl J. Waters; Chas. Williamson—468
Book review: ABC's *of magnetism* by Barron Kemp and Imperio Azteca; Chas. Williamson—468
Book review: *The algebra of probable inference* by R. T. Cox; E. T. Jaynes—66
Book review: *Atlas of optical phenomena* by Michel Cagnet, Maurice Francon, and Jean Claude Thrierr; James A. Eyer—466
Book review: *Basic concepts of physics* by Arthur Beiser; F. W. Van Name, Jr.—741
Book review: *Beta decay for pedestrians*, Robert L. Weber—144
Book review: *Calculus, Volume* II by Tom H. Apostol; Charles H. Holbrow—401
Book review: *Careers in astronautics and rocketry*, Robert L. Weber—149
Book review: *Causality and chance in modern physics* by David Bohm; W. H. Furry—227
Book review: *The challenges of space* edited by Hugh Odishaw; Francis T. Worrell—811
Book review: *Classical electricity and magnetism* by Wolfgang K. H. Panofsky and Melba Phillips; C. Harrison Dwight—224
Book review: *The collected papers of Enrico Fermi*, Vol. *1;* Philip Morrison—740
Book review: *College physics* by Ray W. Kenworthy; Robert A. Reitz—219
Book review: *Concise physics for ancillary degree students* by R. B. Morrison; H. L. Armstrong—145
Book review: *Concise physics for ancillary degree students* by R. B. Morrison; Robert L. Weber—464
Book review: *The distribution and motion of interstellar matter in galaxies* edited by L. Woltjer; Thornton Page—740
Book review: *Elementary solid state physics: a short course* by Charles Kittel; C. H. Holbrow—630
Book review: *Electromagnetics* by Robert M. Whitmer; Francis T. Worrell—310
Book review: *Electron transport in metals* by J. L. Olsen; John M. Bailey—813
Book review: *Elementary quantum field theory* by Ernest M. Henley and Walter Thirring; Joseph David Harris—221
Book review: *Elsevier's dictionary of general physics in six languages* compiled and arranged by W. E. Clason; W. P. Ganley—630
Book review: *Energy for man: from windmills to nuclear power* by Hans Thirring; Thomas D. Miner—311
Book review: *Experimental physics for young people* by Alexander Efron; Gilbert C. Finlay—556
Book review: *Exploring the universe* edited by Louise B. Young; Thornton Page—741
Book review: *Extraction of signals from noise* by L. A. Wainstein and V. D. Zubakov; Arthur A. Mullin—68
Book review: *Fundamentals of rockets, missiles and spacecraft*, Robert L. Weber—145
Book review: *Experimental electronics for young people* by Harvey Pollack; Charles Williamson—70
Book review: *Forces and fields, the concept of action at a distance in the history of physics* by Mary Hesse; William T. Scott—628
Book review: *Fundamentals and techniques of mathematics for scientists* by M. M. Nicolson; Melba Phillips—146
Book review: *Fundamentals of acoustics* by Lawrence E. Kinsler and Austin R. Frey; Carl E. Adams—812
Book review: *Group theory and solid state physics* by L. Mariot; John L. Prather—892
Book review: *Having fun with transistors* by Len Buckwalter; Charles Williamson—311
Book review: *The historical roots of the principle of the conservation of energy* by Erwin N. Hiebert; Sanborn Brown—147
Book review: *How to build electronic equipment* by J. Richard Johnson; W. P. Ganley—222
Book review: *Information theory and its engineering applications* by D. A. Bell; John D. Trimmer—815
Book review: *Intelligent machines: an introduction to cybernetics* by D. A. Bell; Albert A. Mullin—223
Book review: *Introduction to electromagnetic fields and waves* by Dale R. Corson and Paul Lorrain; F. W. Van Name, Jr.—556
Book review: *Introduction to elementary particles* by W. S. C. Williams; F. A. Kaempffer—308
Book review: *An introduction to the physics of mass, length and time* by Norman Feather; Raymond J. Seeger—814
Book review: *Introduction to university physics*, Vol. *1* by Joseph Morgan; Russell K. Rickert—947
Book review: *Josiah Willard Gibbs: the history of a great mind* by Lynde Phelps Wheeler; Raymond J. Seeger—809
Book review: *Laboratory physics, third edition* by J. H. Avery and A. W. K. Ingram; H. L. Armstrong—70
Book review: *Lasers* by Bela A. Lengyel; E. T. Jaynes—739
Book review: *Low temperature physics* by L. C. Jackson; Charles E. Holbrow—308
Book review: *Magnetism: from lodestone to polar wandering* by D. S. Parasnis; Francis T. Worrell—68
Book review: *Magnetohydrodynamics* edited by Ali Bulent Cambel, Thomas P. Anderson, and Milton M. Slawsky; F. R. Scott—553
Book review: *The mainstream of physics* by Arthur Beiser; F. R. Scott—309
Book review: *The Mars project* by Wernher von Braun; Thornton Page—633
Book review: *Mathematical logic*, Revised edition by Willard Van Orman Quine, Albert A. Mullin—219
Book review: *Mathematical methods for science students* by G. Stephenson; Arthur A. Mullin—67
Book review: *Mathematical methods in physics and engineering* by John W. Dettman; Robert L. Weber—467
Book review: *Mathematics for quantum mechanics* by John D. Jackson; R. C. Whitten—464
Book review: *Mathematics for the physical sciences* by Herbert S. Wilf; Albert A. Mullin—467
Book review: *Methods of mathematical physics, Volume* II, *partial differential equations* by Richard Courant and David Hilbert, Joseph David Harris—221
Book review: *Meteorites* by Brian Mason, C. Harrison Dwight—224
Book review: *Modern college physics* by J. A. Richards, Jr., F. W. Sears, M. R. Wehr and M. W. Zemansky, Peter Grosewold—223
Book review: *Modern communications* by Thomas H. Crowley, Gerard G. Harris, Stewart E. Miller, John R. Pierce, and John P. Runyon; Albert A. Mullin—465
Book review: *Modern quantum theory* by Behram Kursunoglu; Neal Moore—813
Book review: *The Mössbauer effect* by Hans Frauenfelder; John R. Graham, Jr.—401
Book review: *The myth of simplicity* by Mario Bunge; Albert A. Mullin—891
Book review: *The natural philosophy of time* by G. J. Whitrow; G. C. McVittie—312
Book review: *New perspectives in physics* by L. de Broglie, E. T. Jaynes—225
Book review: *Noise and fluctuations* by D. K. C. MacDonald; E. T. Jaynes—946
Book review: *Non-equilibrium thermodynamics* by Sybren R. de Groot and Peter Mazur; Allen L. King—558
Book review: *Nuclear instruments and their uses, Vol.* I edited by Arthur H. Snell; D. Hywel White—742
Book review: *Perturbation theory and the nuclear many body problem* by Kailash Kumar; Robert Folk—557
Book review: *Physicochemical hydrodynamics* by V. G. Levich; Raymond J. Seeger—892
Book review: *Physics, a basic science* by Frank L. Verwiebe, Gordon E. Van Hooft, and Robert R. Suchy; Judson B. Cross—558
Book review: *Physics and astronomy of the moon* edited by Zdeněk Kopal; Allen L. King—143
Book review: *Physics and politics* by Max Born; Thornton Page—633
Book review: *Physics for students of science and engineering* by David Halliday and Robert Resnick; E. P. Little—632
Book review: *Physics of fully ionized gases* by Lyman Spitzer, Jr.; Raymond J. Seeger—890

Book review: *Principles of mechanics and dynamics* by Sir William Thomson and Peter Guthrie Tait; Raymond J. Seeger—891
Book review: *Physics of the nucleus* by M. A. Preston; Ward Whaling—65
Book review: *Principles of physics* by Earnest S. Greene; Robert F. Paton—402
Book review: *Principles of transistor circuits (second edition)* by S. W. Amos; Carl E. Adams—309
Book review: *The proceedings of the Rutherford international conference Manchester 1961* edited by J. B. Birks; B. James Raz—307
Book review: *The process of education* by Jerome S. Bruner; Robert A. Lufburrow—468
Book review: *Programmed learning and computer-based instruction* edited by John E. Coulson; Albert A. Mullin—147
Book review: *Quantum statistical mechanics* by Leo D. Kadanoff; John D. Trimmer—309
Book review: *Quantum theory: Vol. 1. elements* edited by D. R. Bates; Uri Haber-Schaim—742
Book review: *Radio wave propagation and the ionosphere* by Ya. L. Al'pert; Agnar Pytte—634
Book review: *Science model making* by Robert H. Hapwood; Francis T. Worrell—69
Book review: *Science for the non-scientist* by A. R. Patton, Robert L. Weber—222
Book review: *Semiconductor device physics* by Allen Nussbaum; E. T. Jaynes—220
Book review: *The shift and shape of spectral lines* by R. G. Breene, Jr.; Thornton Page—224
Book review: *Shock waves in physics and chemistry* by J. M. Bradley; Raymond J. Emrich—224
Book review: *Six language dictionary of electronics, automation and scientific instruments* compiled by A. F. Dorian; W. P. Ganley—630
Book review: *Statistical mechanics* by Norman Davidson; Allen L. King—815
Book review: *The story of cosmic rays*, Howard Laster—148
Book review: *The structure of field space* by Domonic G. G. Edelen; Raymond J. Seeger—814
Book review: *The structure of scientific revolutions* by Thomas S. Kuhn; David Hawkins—554
Book review: *The study of rockets, missiles, and space made simple* by Walter B. Hendrickson, Jr.; Chas. Williamson—738
Book review: *Superfluid physics* by Cecil T. Lane; E. Maxwell—64
Book review: *Supplement to the Elsevier dictionaries of electronics, nucleonics and telecommunication in six languages* compiled and arranged by W. E. Clason; W. P. Ganley—630
Book review: *A survey of physical theory* by Max Planck; Francis T. Worrell—555
Book review: *Techniques variationelles en radioelectricité* by Lorenzo Cairo and Théo Kahan; Ernst K. Franke—812
Book review: *Temperature, its measurement and control in science and industry*, Vol. *3, Part 2* edited by A. I. Dahl; Robert L. Weber—466
Book review: *Theoretical electromagnetism* by R. H. Atkin; Peter B. Kahn—630
Book review: *Theories of electrons in molecules* by W. T. Simpson; R. C. Whitten—947
Book review: *Theory of molecular excitons* by A. S. Davydov; Harvey Kaplan—220
Book review: *The theory of plasma waves* by Thomas Howard Stix; F. R. Scott—816
Book review: *Thermophysics* by Allen L. King; John D. Trimmer—144
Book review: *The tides and kindred phenomena in the solar system* by Sir George Howard Darwin; Leon Blitzer—70
Book review: *A treatise on dynamics of a particle* by E. J. Routh; Charles H. Holbrow—144
Book review: *Understanding the physical sciences* by Olaf P. Anfinson; Robert L. Weber—652
Book review: *Understanding transformers and coils* by Edward J. Bukstein; Charles Williamson—311
Book review: *Unpublished scientific papers of Isaac Newton* by A. R. Hall and Marie Boas Hall; C. Harrison Dwight—142
Book review: *Worked examples in physics* by V. L. Zubov and V. P. Shal'nov; B. James Raz—225
Book review: *The world of atoms: an introduction to physical science* by J. J. G. McCue; Robert L. Weber—815
Book review: *The world of Leonardo da Vinci, man of science, engineer, and dreamer of flight* by Ivor B. Hart; Raymond J. Seeger—810
Book review: *X-ray optics* by A. J. C. Wilson; C. H. Holbrow—893
Resource letter FC-1 on the evolution of the electromagnetic field concept, William T. Scott—819
Resource letter on friction, Ernest Rabinowicz—897
Resource letter SO-1 on the kinetics and dynamics of satellite orbits, Leon Blitzer—233
Textbooks and significant figures, John Hart—944(L)

Chemical physics

A note on Fermi levels, quasi-Fermi levels and terminal voltages in semiconductor devices, A. G. Jordan, R. W. Lade, and D. L. Scharfetter—490

Commission on College Physics

Commission on college physics expands staff and relocates office—712
Outline of a course in plasma physics, Sanborn C. Brown (committee chairman)—637
Remedial programs available for college physics use—718
Review conference of the commission on college physics, Frank Verbrugge—98

Computers

Book review: *Information theory and its engineering applications* by D. A. Bell; John D. Trimmer—815
Book review: *Intelligent machines: an introduction to cybernetics* by D. A. Bell, Albert A. Mullin—223
A physics independent study course with computer, Alfred M. Bork—364
Utilization of computer in laboratory report grading, Howard Carr and Harry T. Weaver—72(A)

Conferences and institutes

Book review: *The process of education* by Jerome S. Bruner; Robert A. Lufburrow—468
Institutes, symposia, and conferences for the teacher of college physics, Marsh W. White—470(A)
Panel discussion of the second Ann Arbor curriculum conference, Byron E. Cohn, Malcolm Correll, Lawrence N. Hadley, S. W. Harding, Mario Iona—744(A)
Summer institute in modern physics, L. K. Akers, R. T. Overman and L. D. Roberts—73(A)
Summer institutes for high school teachers, I. Walerstein—635(A)

Cosmic rays

Book review: *The story of cosmic rays*, Howard Laster—148

Cosmology

Cosmology, Mach's principle and relativity, R. H. Dicke—500

Courses

A College Physics Course Working Committee, Charles Kittel—73(A)
Comments on the recommendations of the second Ann Arbor conference, James W. Ring—625(L)
Curricula for the undergraduate physics major—a report of the Ann Arbor conference, John Lodge—743(A)
Feynman on physics—an editorial, Walter C. Michels—883
Outline of a course in plasma physics, Sanborn C. Brown (committee chairman)—637
Panel discussion of the second Ann Arbor curriculum conference, Byron E. Cohn, Malcolm Correll, Lawrence N. Hadley, S. W. Harding, Mario Iona—744(A)
A physics independent study course with computer, Alfred M. Bork—364
Recommendations of the second Ann Arbor conference on undergraduate curricula for physics majors—328

Report on the Denver Curriculum Conference, Irving Boekelheide—230(A)
Stages in the education of a physicist: an attempted solution of a pedagogical problem, D. H. Douglass, Jr. and M. W. P. Strandberg—707
Work on an eighth-grade course in electricity and magnetism, Howard L. Laster—743(A)

Demonstrations

Apparatus drawings project. Simple apparatus for three lecture demonstrations, T. Walley Williams, III—42
Book review: *Atlas of optical phenomena* by Michel Cagnet, Maurice Francon, and Jean Claude Thrierr; James A. Eyer—468
A classical analog for relativistic contraction, Lewis Epstein—913
A demonstration-experiment to determine the velocity of sound in air, Robert B. Collagan—743(A)
Demonstration gyroscope, J. R. Prescott—393
A demonstration illustrating the Lorentz transformation, John F. Streib—802
A demonstration of centripetal and centrifugal forces, Harley J. Haden—635(A)
Demonstration of nuclear magnetic resonance in cobalt with a "grid dip" meter, R. J. Blume—58
Demonstration of penetration of potential barriers, Walter J. Rhein—808
Demonstration of trajectories, Hans Weltin—212
Demonstration of the zeros of a Fourier transform, Harlan W. Lefevre—134
Demonstrations of "weight," Richard E. Haney—391
Electromagnetic levitator, Harvey E. White and Hans Weltin—925
Electrostatic demonstrations with charged inflated balloons, M. D. Daybell and R. J. Liefeld—135
Extension of Archimedes' reasoning, J. A. Van den Akker—943(L)
Independence of motion apparatus, J. R. Prescott and F. Terentiuk—215
Interference pattern of beats, L. G. Hoxton—794
A magnetic resonance demonstration model, John J. Hill—446
Mousetrap model of chain reactions, H. D. Rathgeber—62
The Orins science lecture demonstration program for high school science teachers, J. B. Christie and C. J. Craven—894(A)
Photographs of the center of mass, Félix Castillo-Jiménez—299
Pulses on Lumped-Constant delay line, R. W. Cole—315(A)
A resonant circuit experiment/demonstration for the beginning physics course, N. S. Kendrick, Jr.—894(A)
Ruby lasers, with demonstration, Ralph L. Hutcheson—744(A)
Simulated nuclear potential well, John W. McClain—888(L)
Some not-so-simple demonstrations, Thomas R. Sandin—635(A)
A spark chamber for cosmic ray demonstrations, James A. Earl—571
Time switch for a corridor demonstration, Wallace A. Hilton—132
Van Allen belt demonstration, Patrick O. Braden—459

Department administration, maintenance, activities

Changes in the physics program at the Colorado school of mines, V. Allan Long—744(A)

Editorials

Beyond the call of duty: an editorial of appreciation, Walter C. Michels and W. P. Ganley—474
Feynman on physics—an editorial, Walter C. Michels—883

Education: physics and science

Back-of-the-envelope calculations, R. Hobart—628(L)
Book review: *Careers in astronautics and rocketry* by Carsbie C. Adams and Wernher von Braun; Robert L. Weber—148
Book review: *Experimental physics for young people* by Alexander Efron; Gilbert C. Finlay—556
Book review: *The process of education* by Jerome S. Bruner; Robert A. Lufburrow—468
Book review: *Programmed learning and computer-based instruction* edited by John E. Coulson; Albert A. Mullin—147
Book review: *Science for the non-scientist* by A. R. Patton, Robert L. Weber—222
Book review: *The world of atoms: an introduction to physical science* by J. J. C. McCue; Robert L. Weber—815
Comments on the recommendations of the second Ann Arbor conference, James W. Ring—625(L)
Device for measuring sun position, W. M. Pierce—230(A)
The Georgetown general physics course for physical science majors—743(A)
Institutional influences in the graduate training of eminent physicists, B. R. Siebring—618
My year of high school teaching in North Louisiana, Charles Williamson—315(A)
On communicating physics, Raymond J. Seeger—743(A)
One physicist looks at science education, Robert Karplus—743(A)
Peace Corps Seeks Science Teachers—462
Physics in engineering education, George Pake—817(A)
Physics teaching: an anthropological angle, Edward B. McNeil—774
Problems in physics advanced placement, Harald C. Jensen—228(A)
Recommendations of the second Ann Arbor conference on undergraduate curricula for physics majors—328
Report on the first Ann Arbor conference, D. J. Tendam—635(A)
Report on second Ann Arbor conference, Robert Henry—635(A)
The Regional Counselor program in Colorado, Paul F. Bartunek—150(A)
Report on the Denver Curriculum Conference, Irving Boekelheide—230(A)
Science fair projects, Joseph H. Kraus—138
Science fair projects in physics, James R. Stevenson—462(L)
The science program at Chicago Teachers College North, Allen D. Weaver—228(A)
Stages in the education of a physicist: an attempted solution of a pedagogical problem, D. H. Douglass, Jr. and M. W. P. Strandberg—707
The training of a Danish physicist, C. Sharp Cook—470(A)

Electricity and magnetism

Apparatus drawings project. Simple apparatus for three lecture demonstrations, T. Walley Williams, III—42
Book review: ABC's *of magnetism* by Barron Kemp and Imperio Azteca; Chas. Williamson—468
Book review: *Classical electricity and magnetism* by Wolfgang K. H. Panofsky and Melba Phillips, C. Harrison Dwight—224
Book review: *Electromagnetics* by Robert M. Whitmer; Francis T. Worrell—310
Book review: *Forces and fields, the concept of action at a distance in the history of physics* by Mary Hesse; William T. Scott—628
Book review: *Introduction to electromagnetic fields and waves* by Dale R. Corson and Paul Lorrain; F. W. Van Name, Jr.—556
Book review: *Magnetism: from lodestone to polar wandering* by D. S. Parasnis; Francis T. Worrell—68
Book review: *Modern communications* by Thomas H. Crowley, Gerard G. Harris, Stewart E. Miller, John R. Pierce, and John P. Runyon; Albert A. Mullin—465
Book review: *Techniques variationelles en radioélectricité* by Lorenzo Carlo and Théo Kahan; Ernst K. Franke—812
Book review: *Theoretical electromagnetism* by R. H. Atkin; Peter B. Kahn—630
Book review: *Understanding transformers and coils* by Edward Buckstein; Charles Williamson—311
The concept of electromagnetic energy density, James C. Penley—744(A)
Demonstration of the zeros of a Fourier transform, Harlan W. Lefevre—134
The determination of impedance using current steps, M. Schwartz and W. Dennis—313(A)
Displacement currents and magnetic fields, A. P. French and Jack R. Tessman—201
Electric field of a charge moving in a medium, G. M. Volkoff—601
Electromagnetic induction-some pedagogic comments, Richard L. Burling—217
Electromagnetic levitator, Harvey E. White and Hans Weltin—925
Electron traps and thermoluminescence, Michael Svonavec—745(A)
Electrostatic demonstrations with charged inflated balloons, M. D. Daybell and R. J. Liefeld—135

Family of electrical image problems, Lee Larson—470(A)
Faraday's law and Ampere's law, Francis W. Sears—439
Film review: *Coulomb's force constant*, David Lazarus—736
Film review: *Coulomb's law*, David Lazarus—736
Film review: *Speed of light*, Herbert Priestley—737
Forces and fields in special relativity, W. P. Ganley—510
Formalised system of equations in electromagnetism, H. G. Venkates—153
A generalized flow equation, David J. Katsanis—459
Geometrical model of electromagnetic fields, Edward S. Lowry—871
Insulators for electrometers designed for current measurements of 1×10^{-17} amperes, W. R. Williams—313(A)
An inverse-square law experiment, Robert A. Lufburrow—60
Interpretation of the displacement current, W. G. V. Rosser—807
Let's be rational, Francis W. Sears—299
Linear or nonlinear?, Harry E. Stockman—728
Lines with ends to describe div B=0, Mario Iona—398(L)
A low-cost thermocouple potentiometer, Francis T. Worrell—216
Magnetic field demonstrations, H. W. Dosso and R. H. Vidal—59
Magnetic mirror effect, James C. Thompson—397(L)
A magnetic resonance demonstration model, John J. Hill—446
Maxwell, displacement current, and symmetry, Alfred M. Bork—854
Maxwell's equations as properties of the vortex sponge, Edward M. Kelly—785
Measurement of electrostatic field between large parallel plates, C. W. Thompson and L. V. Holroyd—396
Measurement of magnetic susceptibilities by the Quincke method, David B. McLay and Harry M. Johnson—457
Measurement of the velocity of light through μ_0, ϵ_0, William E. Stephens—105
Multipole expansion of Coulomb energy, B. C. Carlson and G. L. Morley—209
A neglected method for measuring Curie points, E. V. Smith—731
A note on Fermi levels, quasi-Fermi levels and terminal voltages in semiconductor devices, A. G. Jordan, R. W. Lade, and D. L. Scharfetter—490
Outline of a course in plasma physics, Sanborn C. Brown (committee chairman)—637
Paleomagnetism, Norman D. Watkins—229(A)
The parallel-plate plasma problem, Richard B. Hall—696
Phenomena associated with microwave breakdown in flowing oxygen gas, J. G. Skinner and J. J. Brady—469(A)
Pinball analog for electrical circuits, Harold Weinstock—887(L)
On the possibility of observing the "magnetic charge" of an electron, Halstead Harrison, Nicholas A. Krall, O. C. Eldridge, F. Fehsenfeld, Wade L. Fite and Werner B. Teutsch—249
Pulses on lumped-constant delay line, R. W. Cole—315(A)
The resistance to Ohm's law, Morton L. Schagrin—536
A resonant circuit experiment/demonstration for the beginning physics course, N. S. Kendrick, Jr.—894(A)
Resource letter FC-1 on the evolution of the electromagnetic field concept, Wililam T. Scott—819
Schiff's charges and currents in rotating matter, David L. Webster—590
Self-stress covariance and the classical electron, F. R. Tangherlini—285
Simple method for measuring Curie point, Wililam T. Oosterhuis—132
Stability of a conducting droplet under the influence of surface tension and electrostatic forces, C. D. Hendricks and J. M. Schneider—450
Student measurement of Fermi energy by positron annihilation, John D. McGervey—713
TEM modes and circular polarization, Kaiser S. Kunz—297
What makes an electric current "flow," W. G. V. Rosser—884
Work on an eighth-grade course in electricity and magnetism, Howard L. Laster—743(A)

Electronics

Book review: ABC's *of electronics* by Farl J. Waters; Chas. Williamson—468
Book review: *Advances in electronics and electron physics*, Vol. *15*, edited by L. Marton; William T. Anderson—64
Book review: *Experimental electronics for young people* by Harvey Pollack; Charles Williamson—70
Book review: *Having fun with transistors* by Len Buckwalter; Charles Williamson—311
Book review: *How to build electronic equipment* by J. Richard Johnson, W. P. Ganley—222
Book review: *Nuclear instruments and their uses*, Vol. *1* edited by Arthur H. Snell; D. Hywel White—742
Book review: *Principles of transistor circuits* (*second edition*) by S. W. Amos; Carl E. Adams—309
Book review: *Radio wave propagation and the ionosphere* by Ya. L. Al'pert; Agnar Fytte—634
Book review: *Semiconductor device physics* by Allen Nussbaum, E. T. Jaynes—220
Coincidence circuit, Baily Donally—133
Electron velocity distributions in gases, Joseph C. Bowe—905
Film review: *Short time intervals*, Jesse W. Beams—553
An inexpensive optical-lever amplifier for studying the Brownian motion of a galvanometer, K. S. White—922
Linear or nonlinear?, Harry E. Stockman—728
Negative tungsten ions, Floyd L. Leidal—149(A)
A note on Fermi levels, quasi-Fermi levels and terminal voltages in semiconductor devices, A. G. Jordan, R. W. Lade, and D. L. Scharfetter—490
Phase shifting attachment for oscilloscope, L. H. Bryant—471(A)
Rapid bread-boarding of simple electronic circuits, David L. Cone—229(A)
What about hi-fi?, Antoine Leyn—895(A)

Experiments

The absorption of gamma-ray photons in lead, Lester L. Skolil—634(A)
Acceleration of gravity apparatus, J. Taylor Mitchell—392
The analysis of the absorption of gamma-ray photons in lead, Donald Davison—634(A)
Behavior of a helium balloon in a car, Hans G. Graetzer and P. W. Williams—302(L)
Billiard-ball collision experiment, J. H. Bayes and William T. Scott—197
Book review: *Laboratory physics, third edition* by J. H. Avery and A. W. K. Ingram; H. L. Armstrong—70
An experiment offering varied experience: conductivity changes of a germanium crystal under tension and illumination, Mildred Allen and Erwin J. Saxl—837
An experiment on angular momentum for the introductory laboratory, H. N. Palmieri and Karl Strauch—91
An experimental one-dimensional periodic lattice, J. R. Townsend—470
Growth of hexamethylenetetramine crystal from vapor: a laboratory experiment, Wm. J. Veigele—598
Heat waves and Angström's method, Howard C. Bryant—325
Improvements in an experiment on diffraction of light by sound, H. L. Armstrong—132
Improvements in an experiment on diffraction of light by sound, J. S. Morgan—735(L)
Information by indirect methods, Robert A. Lufburrow—215
An inverse-square law experiment, Robert A. Lufburrow—60
Iodine source for half-life experiments, Frank L. Moore, Jr.—362
A laboratory experiment on the kinetic theory of gases, Frank L. Weichman—930
Laboratory experiments on the Hall effect using evaporated metal films, M. A. Jeppesen, S. R. Flagg, and J. D. Rancourt—860
A laboratory linear analog for lattice dynamics, R. B. Runk, J. L. Stull, and O. L. Anderson—915
Magnetic mirror effect, James C. Thompson—397(L)
Measurement of the duration of collision between steel balls, Oleg Jefimenko—230(A)
Measurement of electrostatic field between large parallel plates, C. W. Thompson and L. V. Holroyd—396
Measurement of magnetic susceptibilities by the Quincke method, David B. McLay and Harry M. Johnson—457
Measurement of the velocity of light through μ_0, ϵ_0, William E. Stephens—105

Measurement of the velocity of sound in gases, H. J. Wintle—942
A mechanical analogy of nuclear scattering, D. C. Tenney—316(A)
A mechanical determination of the Boltzman distribution, Frank Oppenheimer, George Murray and Donald Allen—149(A)
A neglected method for measuring Curie points, E. V. Smith—731
Neutron negative source experiment, Ernest Mathieson—730
On the way to open-ended experiments for physics majors, G. Friedmann—693
Principles of P–N junction detectors, Gordon M. Brown, Alan F. Clark, and Philip R. Pluta—19
Radioactive iodine sources, Arthur R. Quinton—734(L)
A resonant circuit experiment/demonstration for the beginning physics course, N. S. Kendrick, Jr.—894(A)
Resonant detection of light pressure by a torsion pendulum in air—an experiment for underclass laboratories, Robert E. Pollock—901
Rubber band experiment in the thermodynamics, H. B. Carroll, M. Eisner, and R. M. Henson—808
A simple experiment on the impact of falling bodies, Leslie H. Bryant—229(A)
Simple method for measuring Curie point, William T. Oosterhuis—32
A simple spring gun; experiments; demonstrations, Michael Rice—89
A simulated scattering experiment, H. Brody—729
Some experiments on nuclear magnetic resonance, Bailey L. Donnally and Enrique Bernal G—779
Stroboflash measurement of the velocity of a bullet, E. V. Briggs—548
Student measurement of Fermi energy by positron annihilation, John D. McGervey—713
$T=T_0 \exp(-\mu\theta)$, George M. Horton—391
Undergraduate experiment on elasticity of rubber bands, Emmanuel P. Papadakis—938
A wavefront-reconstruction experiment for the optics laboratory, Stuart B. Elliott—312(A)

Films

Characteristics of color films, R. L. Brown—470(A)
Film review: *Change of scale*, Dale V. Ulrich—735
Film review: *Coulomb's force constant*, David Lazarus—736
Film review: *Coulomb's law*, David Lazarus—736
Film review: *Forces:* PSSC *film and excerpt from it*, Frederick L. Brown—400
Film review: *Frames of references*, PSSC *film and excerpts* I *and* II, Frederick L. Brown—400
Film review: *Inertia* and *Inertial mass*, Malcolm Correll—463
Film review: *Long time intervals*, Frederick L. Brown—553
Film review: *Measuring large distances*, Richard E. Garrett—738
Film review: *Mechanical and thermal energy* by Jerrold Zacharias; Brother Columban, C.F.X.—307
Film review: *Speed of light*, Herbert Priestley—737
Film review: *Short time intervals*, Jesse W. Beams—553
Film review: *Time and clocks*, Jesse W. Beams—552
Film review: *Time dilation*, Kenneth Greisen—889

Fluids: liquids and gases

Absolute viscosity of water, H. Neal Bertram—214
Book review: *Physicochemical hydrodynamics* by V. G. Levich; Raymond J. Seeger—892
Book review: *Superfluid physics* by Cecil T. Lane; E. Maxwell—64
Book review: *The tides and kindred phenomena in the solar system* by Sir George Howard Darwin: Leon Blitzer—70
The calculation of the radial distribution function for a cell-model liquid, J. M. Phillips—817(A)
An electromagnetic acceleration correction to the Debye relaxation time, Robert W. Schmieder—885
Electron velocity distributions in gases, Joseph C. Bowe—905
Equation of state for an ionized gas, Makoto Takeo—469(A)
Film review: *Mechanical and thermal energy* by Jerrold Zacharias; Brother Columban, C.F.X.—307
A generalized flow equation, David J. Katsanis—459
Homogeneous nucleation of vapor condensation, II, James E. McDonald—31
Interference pattern of beats, L. G. Hoxton—794
Kinetic theory of gases, Frank L. Moore, Jr.—213
Lagrangian solutions of the equations of motion in fluid mechanics by integrating certain types of nonlinear ordinary differential equations, K. H. Ruei—170
Measurement of magnetic susceptibilities by the Quincke method, David B. McLay and Harry M. Johnson—457
Measurement of the velocity of sound in gases, H. J. Wintle—942
Outline of a course in plasma physics, Sanborn C. Brown (committee chairman)—637
Phenomena associated with microwave breakdown in flowing oxygen gas, J. G. Skinner and J. J. Brady—469(A)
On the relevant dimension in the Knudsen number criterion, Harold Y. Wachman—548
Physics in a toy boat, I. Finnie and R. L. Curl—289
The solution of the Stokes flow of a sphere by minimization of the dissipation of energy, Kenneth C. DuPont and Philip Rosen—294
Stability of a conducting droplet under the influence of surface tension and electrostatic forces, C. D. Hendricks and J. M. Schneider—450
Variation of air viscosity with temperature, M. McInally—732

General physics: educational aspects

Book review: *The mainstream of physics* by Arthur Beiser; F. R. Scott—309
Book review: *College physics* by Ray W. Kenworthy, Robert A. Reitz—219
Book review: *Concise physics for ancillary degree students* by R. B. Morrison; H. L. Armstrong—145
Book review: *Modern college physics* by J. A. Richards, Jr., F. W. Sears, M. R. Wehr and M. W. Zemansky, Peter Grosewold—223
Book review: *Principles of physics* by Earnest S. Greene; Robert F. Paton—402
Book review: *Worked examples in physics* by V. L. Zubov and V. P. Shal'nov, B. James Raz—225
A comment on teaching wave motion, D. Murray Alexander—229(A)
Contemporary electricity for elementary physics, Frieda A. Stahl—387
The Coriolis acceleration, J. M. Pike—313(A)
A course combining general chemistry and general physics for science majors, Harry W. Kendall—73(A)
Electricity, stepchild of elementary physics, Frieda A. Stahl—313(A)
Error analysis in a general physics laboratory, Gary Wootan and W. B. Packard—62
Falling satellite, Don. C. Kelly—394
Faraday's law and Ampere's law, Francis W. Sears—439
Feynman on physics—an editorial, Walter C. Michels—883
Film review: *Forces:* PSSC *film and excerpt from it;* Frederick L. Brown—400
Film review: *Frames of reference*, PSSC *film and excerpts* I *and* II; Frederick L. Brown—400
An interesting correlation involving good grades and student habits, D. J. Prowse—460(L)
Kinetic theory of gases, Frank L. Moore, Jr.—213
A mechanical determination of the Boltzman distribution, Frank Oppenheimer, George Murray and Donald Allen—149(A)
On the way to open-ended experiments for physics majors, G. Friedmann—693
Physics teaching: an anthropological angle, Edward B. McNeil—774
Programed materials for college physics teaching, Tracy Logan—886(L)
Recommendations of the second Ann Arbor conference on undergraduate curricula for physics majors—328
Some additions to our Southern California section creativity committee report of 1960, Edward M. Little—635(A)
Some useful analogies in freshman physics, W. R. Rusk—72(A)
The underdeveloped exponential, J. Barton Hoag—72(A)

General physics: instructional techniques

Book review: *Basic concepts of physics* by Arthur Beiser; F. W. Van Name, Jr.—741
Book review: *Concise physics for ancillary degree students* by R. B. Morrison; Robert L. Weber—464

Book review: *Introduction to university physics*, Vol. *1* by Joseph Morgan; Russell K. Rickert—947
Book review: *Physics for students of science and engineering* by David Halliday and Robert Resnick; E. P. Little—632
Book review: *Understanding the physical sciences* by Olaf P. Anfinson; Robert L. Weber—632
Classes of Carnot cycles, Robert A. Lufburrow—480
An elementary presentation of the concept of force, Bancroft W. Sitterly—743(A)
Error analysis in a general physics laboratory, Richard Hanau—734(L)
Extension of Archimedes' reasoning, J. A. Van den Akker—943(L)
Fermi questions, Philip Morrison—626(L)
Helping students to master "the method of no-parallax," Tracy H. Logan—628(L)
Information by indirect methods, Robert A. Lufburrow—215
Interpretation of the displacement current, W. G. V. Rosser—807
An inverse-square law experiment, Robert A. Lufburrow—60
Measurement of the duration of collision between steel balls, Oleg Jefimenko—230(A)
Nomographs speed physics teaching, William W. Hunt—471(A)
A paradox contest for first year college physics students, Charles L. Beckel—550(L)
Pinball analog for electrical circuits, Harold Weinstock—887(L)
Presentation of angular momentum in introductory courses—469(A)
Propositional physics, Richard Gillespie—228(A)
Remedial programs available for college physics use—718
Resource letter on friction, Ernest Rabinowicz—897
Save the slug, Roland A. Jalbert—625(L)
A simple circuit board, Leonard D. Flansburg—624
A simulated scattering experiment, H. Brody—729
Teaching physics with overhead projection, R. R. Easter—229(A)
Two unsupervised laboratory projects, David Telfair—635(A)
Weight and weightlessness of elastic solids, Erna M. J. Herrey—458
What makes an electric current "flow," W. G. V. Rosser—884

Geophysics

Film review: *Long time intervals*, Frederick L. Brown—553
Paleomagnetism, Norman D. Watkins—229(A)

Heat and thermodynamics

Book review: *Energy for man: from windmills to nuclear power* by Hans Thirring; Thomas D. Miner—311
Book review: *Low temperature physics* by L. C. Jackson; Charles E. Holbrow—308
Book review: *Non-equilibrium thermodynamics* by Sybren R. de Groot and Peter Mazur; Allen L. King—558
Book review: *Temperature, its measurement and control in science and industry*, Vol. *3, Part 2* edited by A. I. Dahl; Robert L. Weber—466
Book review: *Thermophysics* by Allen L. King; John D. Trimmer—144
Cesium diode thermionic energy converter, Byron Thinger—471(A)
Classes of Carnot cycles, Robert A. Lufburrow—480
Coefficient of thermal expansion and Young's modulus for a one-dimensional model of a solid, J. Mazur and Robert J. Rubin—835
Film review: *Mechanical and thermal energy* by Jerrold Zacharias; Brother Columban, C.F.X.—307
Heat waves and Angström's method, Howard C. Bryant—325
Internal energy and specific heat of a Boyle's-law gas, Robert Weinstock—336
Low-temperature physics, E. M. Ginsberg—403(A)
A "massless" spring, Harald C. Jensen—744(A)
Peltier heat experiment, R. C. Hanson—469(A)
Rubber band experiment in thermodynamics, H. B. Carroll, M. Eisner, and R. M. Henson—808
A simplified simplification of Carathéodory's treatment of thermodynamics, Francis W. Sears—747
A swinging thermometer, Peter D. Richardson—395
A theoretical demonstration of the concept of entropy, Roy McHenry—635(A)
Thermodynamics of a rubber band, J. B. Brown—397
Variation of air viscosity with temperature, M. McInally—732

History and biography

Anniversaries in 1963 of interest to physicists, E. Scott Barr—75
Aristotle's notion of speed, Raymond Seeger—138
Book review: *The collected papers of Enrico Fermi*, Vol. *1;* Philip Morrison—740
Book review: *Forces and fields, the concept of action at a distance in the history of physics* by Mary Hesse; William T. Scott—628
Book review: *The historical roots of the principle of the conservation of energy*, Sanborn Brown—147
Book review: *Josiah Willard Gibbs: the history of a great mind* by Lynde Phelps Wheeler; Raymond J. Seeger—809
Book review: *The story of cosmic rays*, Howard Laster—148
Book review: *Unpublished scientific papers of Isaac Newton* by A. R. Hall and Marie Boas Hall; C. Harrison Dwight—142
Book review: *The world of Leonardo da Vinci, man of science, engineer, and dreamer of flight* by Ivor B. Hart; Raymond J. Seeger—810
Conversations with Albert Einstein, R. S. Shankland—47
The "First" United States patent, R. C. Hitchcock—316(A)
A history of physics course for undergraduate students, E. Scott Barr—73(A)
The homocentric spheres of Eudoxus, Hugo N. Swenson—456
Insight and taste (response in memory of Francis Lee Friedman), Philip Morrison—477
Maxwell, displacement current, and symmetry, Alfred M. Bork—854
Maxwell's equations as properties of the vortex sponge, Edward M. Kelly—785
A neglected resource for the history of physics, E. Scott Barr—894(A)
On the mistranslation of a passage in Einstein's original paper on relativity, Charles Scribner, Jr.—398(L)
Note on the invention of photometry, W. E. Knowles Middleton—177
The resistance to Ohm's law, Morton L. Schagrin—536
Resource letter FC-1 on the evolution of the electromagnetic field concept, William T. Scott—819
Wanted, a BA Wheatstone bridge, Bernard S. Finn—303(L)

Laboratories: construction and equipment

A physics building for the University of California, Riverside, A. M. Russell and R. R. Hewitt—417

Laboratory arts and techniques

Book review: *Laboratory physics, third edition* by J. H. Avery and A. W. K. Ingram; H. L. Armstrong—70
Error analysis in a general physics laboratory, Gary Wootan and W. B. Packard—62

Laboratory: organization and operation

Collective experiments in the physics laboratory, Otto Blüh—73(A)
Error analysis in a general physics laboratory, Richard Hanau—734(L)
Modern physics laboratory for beginning science and engineering students, George Carney—73(A)
On the way to open-ended experiments for physics majors, G. Friedmann—693
Utilization of computer in laboratory report grading, Howard Carr and Harry T. Weaver—72(A)

Light

Apparatus for determining Brewster's angle, T. G. Bullen, F.S.C.H.—302
Book review: *Absorption spectroscopy* by Robert P. Bauman; C. Harrison Dwight—946
Book review: *Atlas of optical phenomena* by Michel Cagnet, Maurice Francon, and Jean Claude Thrierr; James A. Eyer—468
Book review: *Lasers* by Bela A. Lengyel; E. T. Jaynes—739
Book review: *The shift and shape of spectral lines* by R. G. Breene, Jr., Thornton Page—224
Book review: *Theory of molecular excitons* by A. S. Davidov, Harvey Kaplan—220
Caustic of the primary rainbow, J. E. McDonald—282
Characteristics of color films, R. L. Brown—470(A)

Decay of intensity of certain Hg lines in a Hg–A discharge, E. E. Stepp—817(A)
The design and construction of a ruby maser, James J. Brady—71(A)
Determination of the quantum numbers for the levels of the 5461 A line in Hg, Jorge Marlo Flores—181
Electron traps and thermoluminescence, Michael Svonavec—745(A)
An elementary theoretical approach to the Abbe theory of optical image formation, Anthony Gerrard—723
Film review: *Speed of light*, Herbert Priestley—737
Improvements in an experiment on diffraction of light by sound, H. L. Armstrong—132
Improvements in an experiment on diffraction of light by sound, J. S. Morgan—735(L)
An inexpensive optical-lever amplifier for studying the Brownian motion of a galvanometer, K. S. White—922
Interference of linearly polarized light with perpendicular polarizations, Richard Hanau—303(L)
The interference of linearly polarized light with perpendicular polarizations, Richard Hanau—314(A)
On the interference of linearly polarized light with perpendicular polarizations, Alexander Langsdorf, Jr.—624(L)
Light emission from a helium microwave plasma, M. F. Anderson—71(A)
A manual of radiation measurements, Robert A. Gross—219
A nanosecond light pulser, C. A. Smith and D. O. Wells—469(A)
Natural lifetimes for resonance transitions in atomic nitrogen, C. E. Fairchild—469(A)
Nitrogen recombination studied by electron spin resonance, K. M. Evanson, D. B. Clark, and D. S. Burch—71(A)
Notes on two optical aberration problems, Eric J. Irons—940
Phase shift in the shadow region of single straight-edge diffraction pattern, J. L. Page and K. L. Shaklee—743(A)
Radiance, Fred E. Nicodemus—368
Resonant detection of light pressure by a torsion pendulum in air–an experiment for underclass laboratories, Robert E. Pollock—901
Resource letter QSL-1 on quantum and statistical aspects of light, P. Carruthers—321
Ruby lasers, with demonstration, Ralph L. Hutcheson—744(A)
A simplified normal Zeeman effect experiment, C. Dewey Cooper—895(A)
A spectroscopic sodium flame, Noojin Walker, Jr.—945(L)
An undergraduate research project: photon diffraction, Roy H. Biser—29
A wave front-reconstruction experiment for the optics laboratory, Stuart B. Elliott—312(A)

Low temperature physics

Book review: *Low temperature physics* by L. C. Jackson; Charles H. Holbrow—308
Book review: *Superfluid physics* by Cecil T. Lane; E. Maxwell—64

Mathematics

Associated Legendre functions, Charles W. Scherr and Eugene V. Ivash—753
Book review: *The algebra of probably inference* by R. T. Cox; E. T. Jaynes—66
Book review: *Calculus, Volume* II by Tom M. Apostol: Charles H. Holbrow—401
Book review: *Extraction of signals from noise* by L. A. Wainstein and V. D. Zubakov; Arthur A. Mullin—68
Book review: *Fundamentals and techniques of mathematics for scientists* by M. M. Nicolson; Melba Phillips—146
Book review: *Group theory and solid state physics* by L. Mariot; John L. Prather—892
Book review: *Mathematical logic. Revised edition* by Willard Van Orman Quine, Albert A. Mullin—219
Book review: *Mathematical methods for science students* by G. Stephenson; Arthur A. Mullin—67
Book review: *Mathematical methods in physics and engineering* by John W. Dettman; Robert L. Weber—467
Book review: *Mathematics for quantum mechanics* by John D. Jackson; R. C. Whitten—464
Book review: *Mathematics for the physical sciences* by Herbert S. Wilf; Albert A. Mullin—467
Book review: *Methods of mathematical physics, Volume* II, *partial differential equations* by Richard Courant and David Hilbert, Joseph David Harris—221
Book review: *Techniques variationelles en radioélectricité* by Lorenzo Cairo and Théo Kahan; Ernst K. Franke—812
Complex logarithms, Jesse Platts—313(A)
Derivation of the matrix of rotation about a given direction as a simple exercise in matrix algebra, H. M. Schwartz—730
An extension of Euler's theorem to Minkowski space, H. M. Schwartz—864
A generalized flow equation, David J. Katsanis—459
Group theoretical consideration for the intersection of crystal-ion Zeeman terms, S. A. Marshall, D. Sperber and E. A. Fagen—847
Identification of molecular symmetry groups, James B. Calvert—569
The physical meaning of Parseval's theorem, Harold Hughes—635(A)
Remark on the eigenvectors of angular momentum operators, H. A. Buchdahl—829
Remedial programs available for college physics use—718
S-Matrix solution for the forced harmonic oscillator, R. W. Fuller, S. M. Harris, and E. Leo Slaggie—431
"Slide rule" for complex numbers, J. H. Hetherington—113
Two theorems concerning the Laplace operator, Kalman B. Pomeranz—622
Vector representation of rigid body rotation, Millard F. Beatty—134
Vectors, covariant and contravariant, M. P. Smith and P. C. Wheeler—817(A)
Yes, what is happening to calculus? Robert Weinstock—108

Mechanics, classical

Absolute viscosity of water, H. Neal Bertram—214
Acceleration of gravity apparatus, J. Taylor Mitchell—392
Another version of the conical pendulum, Wallace A. Hilton—58
Answer to problem-pit and the pendulum, John B. Hart—218
Apparatus drawings project. Simple apparatus for three lecture demonstrations, T. Walley William, III—42
Batting the ball, Paul Kirkpatrick—606
Behavior of a helium balloon in a car, Hans G. Graetzer and P. W. Williams—302(L)
Billiard-ball collision experiment, J. H. Bayes and William T. Scott—197
Book review: *Energy for man: from windmills to nuclear power* by Hans Thirring; Thomas D. Miner—311
Book review: *Forces and fields, the concept of action at a distance in the history of physics* by Mary Hesse; William T. Scott—628
Book review: *The historical roots of the principle of the conservation of energy*, Sanborn Brown—147
Book review: *An introduction to the physics of mass, length and time* by Norman Feather; Raymond J. Seeger—814
Book review: *Principles of mechanics and dynamics* by Sir William Thomson and Peter Guthrie Tait; Raymond J. Seeger—891
Book review: *A treatise on dynamics of a particle* by E. J. Routh; Charles H. Holbrow—144
Centripetal force apparatus, Hans Weltin—205
Classical distribution of a mutally interacting ensemble, Carl A. Barlow, Jr.—247
Comment on Kepler's third law without calculus, Seville Chapman—213
Comments on vectorial and geometrical solutions to problems in mechanics, H. L. Armstrong—137
Demonstration gyroscope, J. R. Prescott—393
A demonstration of centripetal and centrifugal forces, Harley J. Haden—635(A)
Demonstration of trajectories, Hans Weltin—212
Demonstrations of "weight", Richard E. Haney—391
Derivation of the matrix of rotation about a given direction as a simple exercise in matrix algebra, H. M. Schwartz—730
Dynamation, D. F. Holcomb and R. M. Cotts—26
Erratum: Axiomatic deduction of the general Lorentz transformations, H. M. Schwartz—140
An experiment on angular momentum for the introductory laboratory, H. N. Palmieri and Karl Strauch—91
Falling satellite, Don C. Kelly—394

Film review: *Forces:* PSSC *film and excerpt from it;* Frederick L. Brown—400
Film review: *Inertia* and *Inertial mass,* Malcolm Correll—463
Film review: *Mechanical and thermal energy* by Jerrold Zacharias; Brother Columban, C.F.X.—307
Film review: *Time and clocks,* Jesse W. Beams—552
Floating of a long square bar, Walter P. Reid—565
Independence of motion apparatus, J. R. Prescott and F. Terentiuk—215
Is the slug necessary?, Francis T. Worrell—305(L)
Kepler's third law "without calculus": comments on a note by Chapman, Robert Weinstock—728
A laboratory linear analog for lattice dynamics, R. B. Runk, J. L. Stull, and O. L. Anderson—915
Lagrange's three particles, David Shelupsky—136
Linear air trough, H. V. Neher and R. B. Leighton—255
A magnetic resonance demonstration model, John J. Hill—446
A "massless" spring, Harald C. Jensen—744(A)
Maxwell's equations as properties of the vortex sponge, Edward M. Kelly—785
Measurement of the duration of collision between steel balls, Oleg Jefimenko—230(A)
The nonconservation of angular momentum of a weight on a string, Edwin X Berry—304(L)
Notes on batting, Paul Kirkpatrick—471(A)
Photographs of the center of mass, Félix Castillo-Jiménez—299
Physics in a toy boat, I. Finnie and R. L. Curl—289
Presentation of angular momentum in introductory courses—469(A)
Problem-Pit and the pendulum, John B. Hart—137
Reformation of the energy equation for a classical system in which the mass changes, A. M. Lemos—228(A)
Resonant detection of light pressure by a torsion pendulum in air–an experiment for underclass laboratories, Robert E. Pollock—901
Resource letter on friction, Ernest Rabinowicz—897
Resource letter SO-1 on the kinetics and dynamics of satellite orbits, Leon Blitzer—233
A simple experiment on the impact of falling bodies, Leslie H. Bryant—229(A)
A simple spring gun; experiments; demonstrations, Michael Rice—89
Slow-motion moment of inertia apparatus, Hans Weltin—586
Stroboflash measurement of the velocity of a bullet, E. V. Briggs—548
$T=T_0\exp(-\mu\theta)$, George M. Horton—391
Undergraduate experiment on elasticity of rubber bands, Emmanuel P. Papadakis—938
Vertical ballistic pendulum apparatus, Hans Weltin—719
Weight and weightlessness of elastic solids, Erna M. J. Herrey—458

Mechanics, quantum

Acceptable solutions and boundary conditons for the Schroedinger and Dirac equations, Baxter H. Armstrong and Edwin A. Power—262
Associated Legendre functions, Charles W. Scherr and Eugene V. Ivash—753
Book review: *Beta decay for pedestrians,* Robert L. Weber—144
Book review: *Causality and chance in modern physics* by David Bohm, W. H. Furry—227
Book review: *Elementary quantum field theory* by Ernest M. Henley and Walter Thirring, Joseph David Harris—221
Book review: *Forces and fields, the concept of action at a distance in the history of physics* by Mary Hesse; William T. Scott—628
Book review: *Mathematics for quantum mechanics* by John D. Jackson; R. C. Whitten—464
Book review: *Modern quantum theory* by Behram Kursunoglu; Neal Moore—813
Book review: *New perspectives in physics* by L. de Broglie, E. T. Jaynes—225
Book review: *Perturbation theory and the nuclear many body problem* by Kailash Kumar; Robert Folk—557
Book review: *Quantum statistical mechanics* by Leo D. Kadanoff; John D. Trimmer—309
Book review: *Quantum theory:* Vol. *1. elements* edited by D. R. Bates: Uri Haber-Schaim—742
Demonstration of penetration of potential barriers, Walter J. Rhein—808
Discussion of quadrupole precession, J. C. Raich and R. H. Good, Jr.—356
Hamiltonian mechanics for band electrons, G. H. Wannier—71(A)
The Heisenberg uncertainty principle, Arthur L. Loeb—945(L)
The Mössbauer effect as a teaching tool, H. Frauenfelder—403(A)
A new derivation of the Heisenberg uncertainty principle, N. K. Tyagi—624
The number of energy levels for a Debye–Hückel or Yukawa potential, Wendell G. Holladay, Jess Brooks Thomas, Jr., and Charles Ray Smith—16
The problem of measurement, Eugene P. Wigner—6
A quantum dynamical description of atoms and radiative processes, Grant R. Fowles—407
Quantum mechanics of beats between weakly coupled oscillators, Paul H. E. Meijer and Tomoyaso Tanaka—161
Remark on the eigenvectors of angular momentum operators, H. A. Buchdahl—829
Remarks on the bound states of a central potental in quantum mechanics, B. W. Downs—277
Resource letter QSL-1 on quantum and statistical aspects of light, P. Carruthers—321
The response of anisotropic defects in solids to stress, J. W. Corbett—521
The role of the observer in quantum theory, Abner Shimony—755
S-Matrix solution for the forced harmonic oscillator, R. W. Fuller, S. M. Harris, and E. Leo Slaggie—431
Scattering theory and adiabatic switching, Kurt Haller—614
Special nature of orbital angular momentum, James D. Louck—378
Two-dimensional oscillator and angular momentum, Eugen Merzbacher—549

Mechanics, statistical

Book review: *Information theory and its engineering applications* by D. A. Bell; John D. Trimmer—815
Book review: *Josiah Willard Gibbs: the history of a great mind* by Lynde Phelps Wheeler; Raymond J. Seeger—809
Book review: *Noise and fluctuations* by D. K. C. MacDonald; E. T. Jaynes—946
Book review: *Perturbation theory and the nuclear many body problem* by Kailash Kumar; Robert Folk—557
Book review: *Quantum statistical mechanics* by Leo D. Kadanoff; John D. Trimmer—309
Book review: *Statistical mechanics* by Norman Davidson; Allen L. King—815
Book review: *Thermophysics* by Allen L. King; John D. Trimmer—144
Coefficient of thermal expansion and Young's modulus for a one-dimensional model of a solid, J. Mazur and Robert J. Rubin—835
Dynamical theory of atom jumps in crystals, Edgar Pearlstein—842
An electromagnetic acceleration correction to the Debye relaxation time, Robert W. Schmieder—885
The Fokker–Planck equation, Edward A. Desloge—237
Homogeneous nucleation of vapor condensation, II, James E. McDonald—31
Identificaton of molecular symmetry groups, James B. Calvert—569
An inexpensive optical-lever amplifier for studying the Brownian motion of a galvanometer, K. S. White—922
A laboratory experiment on the kinetic theory of gases, Frank L. Weichman—930
Plasma equation of state, Don C. Kelly—827
On the relevant dimension in the Knudsen number criterion, Harold Y. Wachman—548
Variation of air viscosity with temperature, M. McInally—732

Microwaves

Demonstration of penetration of potential barrier, Walter J. Rhein—808
Phenomena associated with microwave breakdown in flowing oxygen gas, J. G. Skinner and J. J. Brady—469(A)

Modern physics
Apparatus drawings project. Atomic beam apparatus for determining the mean free paths of potassium atoms in argon, Robert C. Marclay—116
Book review: *Modern college physics* by J. A. Richards, Jr., F. W. Sears, M. R. Wehr and M. W. Zemansky, Peter Grosewold—223
Book review: *Theories of electrons in molecules* by W. T. Simpson, R. C. Whitten—947
Determination of the quantum numbers for the levels of the 5461 A line in Hg, Jorge Marlo Flores—181
Measuring cross sections for low-energy interactions between electrons and molecules, John Darrah, Jon Eliason, and J. J. Brady—469(A)
Modern physics laboratory for beginning science and engineering students, George Carney—73(A)
Natural lifetimes for resonance transitions in atomic nitrogen, C. E. Fairchild—469(A)
Poor man's mass spectrometer, John W. Dewdney—932
The present status of molecular beams, William Lichten—228(A)
A quantum dynamical description of atoms and radiative processes, Grant R. Fowles—407
An undergraduate research project: photon diffraction, Roy H. Biser—29

Nuclear physics
The absorption of gamma-ray photons in lead, Lester L. Skolil—634(A)
The analysis of the absorption of gamma-ray photons in lead, Donald Davison—634(A)
Book review: *Beta decay for pedestrians*, Robert L. Weber—144
Book review: *The collected papers of Enrico Fermi*, Vol. *1;* Philip Morrison—740
Book review: *Energy for man: from windmills to nuclear power* by Hans Thirring; Thomas D. Miner—311
Book review: *The Mössbauer effect* by Hans Frauenfelder; John R. Graham, Jr.—401
Book review: *Nuclear instruments and their uses*, Vol. *1* edited by Arthur H. Snell; D. Hywel White—742
Book review: *Perturbation theory and the nuclear many body problem* by Kailash Kumar; Robert Folk—557
Book review: *Physics of the nucleus* by M. A. Preston; Ward Whaling—65
Book review: *The proceedings of the Rutherford international conference Manchester 1961* edited by J. B. Birks; B. James Raz—307
Coincidence circuit, Bailey Donally—133
The determination of radioactivity in man, Lester L. Skolil—312(A)
The determination of the specific ionization of charged particles in a Wilson-type cloud chamber, Michael Doman—635(A)
Geometrical method for relativistic particle kinematics, Moon H. Cha and Donald G. Simons—280
Iodine source for half-life experiments, Frank L. Moore, Jr.—362
A mechanical analogy of nuclear scattering, D. C. Tenney—316(A)
Mössbauer effect, G. K. Wertheim—1
The Mossbauer effect as a nuclear clock, J. G. Dash—469(A)
Mousetrap model of chain reactions, H. D. Rathgeber—62
Neutron negative source experiment, Ernest Mathieson—730
Photon and electron high-energy physics: present and future, W. K. H. Panofsky—409
Principles of P-N junction detectors, Gordon M. Brown, Alan F. Clark, and Philip R. Pluta—19
Radioactive iodine sources, Arthur R. Quinton—734(L)
Simulated nuclear potential well, John W. McClain—888(L)
A spark chamber for cosmic ray demonstrations, James A. Earl—571
Spectra of protons and alpha particles omitted from CsI(T1) under fast neutron bombardment, T. Young, F. Gabbard, B. D. Kern, and J. L. Beach—313(A)
Subcritical reactor and mechanical perturbations, Michael Svonavec—228(A)
Undergraduate's research work in nuclear emulsions, Floyd L. Judd—72(A)

Particles, elementary
Elementary particle physics, E. L. Goldwasser—403(A)
Introduction to elementary particles by W. S. C. Williams; F. A. Kaempffer—308
Photon and electron high-energy physics: present and future, W. K. H. Panofsky—409

Philosophy of science
Book review: *Causality and chance in modern physics* by David Bohm, W. H. Furry—227
Book review: *Mathematical logic*, Revised edition by Willard Van Orman Quine, Albert A. Mullin—219
Book review: *The myth of simplicity* by Mario Bunge; Albert A. Mullin—891
Book review: *The natural philosophy of time* by G. J. Whitrow; G. C. McVittie—312
Book review: *New perspectives in physics* by L. de Broglie, E. T. Jaynes—225
Book review: *Physics and politics* by Max Born; Thornton Page—633
Book review: *The structure of scientific revolutions* by Thomas S. Kuhn; David Hawkins—554
Book review: *A survey of physical theory* by Max Planck; Francis T. Worrell—555
The problem of measurement, Eugene P. Wigner—6
The role of the observer in quantum theory, Abner Shimony—755

Physics in foreign lands
Current research at the institute of physics, Uppsala, Robert L. Shacklett—471(A)
Experiences of a physicist traveling in Russia, C. P. Slichter—745(A)
My year in Paris, James N. Haag—635(A)
The training of a Danish physicist, C. Sharp Cook—470(A)

Plasma physics
Book review: *Magnetohydrodynamics* edited by Ali Bulent Cambel, Thomas P. Anderson, and Milton M. Slawsky; F. R. Scott—553
Book review: *Physics of fully ionized gases* by Lyman Spitzer, Jr.; Raymond J. Seeger—890
Book review: *Radio wave propagation and the ionosphere* by Ya. L. Al'pert; Agnar Pytte—634
Book review: *The theory of plasma waves* by Thomas Howard Stix; F. R. Scott—816
Electron velocity distributions in gases, Joseph C. Bowe—905
Equation of state for an ionized gas, Makoto Takeo—469(A)
Magnetic mirror effect, James C. Thompson—397(L)
Measuring cross sections for low-energy interactions between electrons and molecules, John Darrah, Jon Eliason, and J. J. Brady—469(A)
Outline of a course in plasma physics, Sanborn C. Brown (committee chairman)—637
The parallel-plate plasma problem, Richard B. Hall—696
Plasma equation of state, Don C. Kelly—827

Relativity and gravitation
Accelerating frames of reference and the clock paradox, Harry Lass—274
Book review: *The structure of field space* by Domonic G. B. Edelen; Raymond J. Seeger—814
A classical analog for relativistic contraction, Lewis Epstein—913
The clock paradox, Edward S. Lowry—59
Comments on "mistranslation of a passage in Einstein's original paper on relativity," J. B. Sykes—734(L)
Conversations with Albert Einstein, R. S. Shankland—47
Cosmology, Mach's principle and relativity, R. H. Dicke—500
A demonstration illustrating the Lorentz transformation, John F. Streib—802
Erratum: Axiomatic deduction of the general Lorentz transformations, H. M. Schwartz—140
An extension of Euler's theorem to Minkowski space, H. M. Schwartz—864
Film review: *Time dilation*, Kenneth Greisen—889

Forces and fields in special relativity, W. P. Ganley—510
A geometric representation of Lorentz frames for linearly accelerated motion, Robert W. Brehme—517
A geometrical approach to relativitistic paradoxes, Jacques E. Romain—576
Geometrical demonstration of velocity transformation in special relativity, Scott C. Daubin—792
Geometrical method for relativistic particle kinematics, Moon H. Cha and Donald G. Simons—280
Guidelines to antigravity, Robert L. Forward—166
Lorentz transformation in the undergraduate curriculum, Jacques E. Romain—870
Lorentz transformation in the undergraduate curriculum, Jeffrey Sokoloff—444
Measurement of the relativistic time dilation using μ-mesons, David H. Frisch and James H. Smith—342
On the mistranslation of a passage in Einstein's original paper on relativity, Charles Scribner, Jr.—398(L)
Mössbauer effect, G. K. Wertheim—1
The Mossbauer effect as a nuclear clock, J. G. Dash—469(A)
On physical geometry—reply to criticism, Werner Hubig—627(L)
Physical geometry and universal forces, G. Schlesinger—212
Schiff's charges and currents in rotating matter, David L. Webster—590
Some applications of the Brehme diagram, Francis W. Sears—269
Special relativity in anisotropic space, W. F. Edwards—482
Stress effects due to Lorentz contraction, Edmond M. Dewan—383
Time dilation derivation, David Kutliroff—137
Time dilation of my mesons: an experiment for teaching relativity, James H. Smith—403(A)

Reports, announcements and news

AAPT High School Awards Program, Stanley S. Ballard—141
Application of X-Ray Analysis—399
Biomathematics training at North Carolina State College, James H. Meade, Jr.—141
Conference on Carbon—306
Contributions solicited for demonstration book—727
Francis Lee Friedman: Oersted medalist for 1962, Malcolm Correll—475
The Friedman lectureship—551
Jerry Barton Hoag, 1898–1962—888
Liquid helium II, the superfluid—462
Minutes of the annual business meeting of the association, Ralph P. Winch—563
Minutes of the annual meeting of the council, Ralph P. Winch—561
National Academy committee seeks recommendations—889
ORINS conference on radioactive isotopes—139
A manual of radiation measuremetns, Robert A. Gross—219
Peace Corps Seeks Science Teachers—462
Plasma diode report available—628
Report of the membership committee for 1962, C. L. Andrews—551
Regioanl counselors in physics, W. C. Kelly—140
Report of the Editor for the Year 1962—406
Report of the President–1962, Frank Verbrugge—473
Request for biographical material concerning A. A. Michelson, Dorothy Michelson Stevens—140
Review conference of the commission on college physics, Frank Verbrugge—98
Symposium on Molecular structure and spectroscopy, Harald H. Nielsen—306
Vacuum Symposium—399
Walter C. Michels resumes his position as Editor—139

Research

Book review: *Temperature, its measurement and control in science and industry*, Vol. *3, Part 2* edited by A. I. Dahl; Robert L. Weber—466
Current research at the institute of physics, Uppsala, Robert L. Shacklett—471
The national science foundation education program at the university of Tennessee, W. M. Bugg—894(A)
Some aspects of research in physics departments in selected colleges and universities, Walter H. Kruschwitz—72(A)
An undergraduate research project: photon diffraction, Roy H. Biser—29
Undergraduate's research work in nuclear emulsions, Floyd L. Judd—72(A)

Rockets and satellites

Book review: *Fundamentals of rockets, missiles and spacecraft*, Robert L. Weber—145
Book review: *The Mars project* by Wernher von Braun; Thornton Page—633
Book review: *The study of rockets, missiles, and space made simple* by Walter B. Hendrickson, Jr.; Chas. Williamson—738
Resource letter SO-1 on the kinetics and dynamics of satellite orbits, Leon Blitzer—233

Secondary school physics

Announcement concerning advanced topics in the PSSC program, Carl J. Lude—471(A)
Book review: *Experimental electronics for young people* by Harvey Pollack; Charles Williamson—70
Book review: *Physics, a basic science* by Frank L. Verwiebe, Gordon E. Van Hooft, and Robert R. Suchy; Judson B. Cross—558
Book review: *Science model making* by Robert H. Hapwood; Francis T. Worrell—69
Indiana physics teachers react to PSSC, Lawrence E. Poorman—635(A)
My year of high school teaching in North Louisiana, Charles Williamson—315(A)
The Orins science lecture demonstration program for high school science teachers, J. B. Christie and C. J. Craven—894(A)
Physics instruction at Maine Township East, Andrew Ahlgren—745(A)
Preparatory curriculum for PSSC and other physics programs, Louis Deall and Lawrence Badar—184
The regional counselor program in Colorado, Paul F. Bartunek—744(A)
The regional counseling program in Wyoming, C. A. Cinnamon—743(A)
Science fair projects, Joseph H. Kraus—138
Summer institutes for high school teachers, I. Walerstein—635(A)
Survey of PSSC students at Purdue, Morris Taylor—635(A)
The teaching of the PSSC physics in small high school, Louise B. Wright—73(A)
Work on an eighth-grade course in electricity and magnetism, Howard L. Laster—743(A)

Social and economic aspects of science

Book review: *Energy for man: from windmills to nuclear power* by Hans Thirring; Thomas D. Miner—311

Solid state physics

Book review: *Electron transport in metals* by J. L. Olsen; John M. Bailey—813
Book review: *Elementary solid state physics: a short course* by Charles Kittel; C. H. Holbrow—630
Book review: *Group theory and solid state physics* by L. Mariot; John L. Prather—892
Book review: *The Mössbauer effect* by Hans Frauenfelder; John R. Graham, Jr.—401
Book review: *Semiconductor device physics* by Allen Nussbaum, E. T. Jaynes—220
Book review: *Theory of molecular excitons* by A. S. Davydov, Harvey Kaplan—220
Book review: *X-ray optics* by A. J. C. Wilson; C. H. Holbrow—893
Demonstration of nuclear magnetic resonance in cobalt with a "grid dip" meter, R. J. Blume—58
Demonstration model of spherical projection for cubic crystals, Adolph E. Spakowski and Robert J. Bacigalupi—807
The design and construction of a ruby maser, James J. Brady—71(A)

Dynamic nuclear orientation of bismuth^{210} in rare-earth double nitrates, R. K. Jeck and W. A. Barker—817(A)
Dynamical theory of atom jumps in crystals, Edgar Pearlstein—842
Electron traps and thermoluminescence, Michael Svonavec—745(A)
The energy band structure of graphite, J. S. McClure—71(A)
An experiment offering varied experience: conductivity changes of a germanium crystal under tension and illumination, Mildred Allen and Erwin J. Saxl—837
An experimental one-dimensional periodic lattice, J. R. Townsend—470(A)
Group theoretical consideration for the intersection of crystal-ion Zeeman terms, S. A. Marshall, D. Sperber and E. A. Fagen—847
Growth of hexamethylenetetramine crystal from vapor: a laboratory experiment, Wm. J. Veigele—598
Hamiltonian mechanics for band electrons, G. H. Wannier—71(A)
Laboratory experiments on the Hall effect using evaporated metal films, M. A. Jeppesen, S. R. Flagg, and J. D. Rancourt—860
Low-temperature physics, E. M. Ginsberg—403(A)
A magnetic resonance demonstration model, John J. Hill—446
Moduledra crystal modules, a teaching and research aid in solid state physics, Arthur L. Loeb and G. W. Pearsall—190
Mössbauer effect, G. K. Wertheim—1
Negative tungsten ions, Floyd L. Leidal—149(A)
A note on Fermi levels, quasi-Fermi levels and terminal voltages in semiconductor devices, A. G. Jordan, R. W. Lade, and D. L. Scharfetter—490
Paramagnetic resonance spectroscopy by spin-temperature modulation, J. C. Kemp—71(A)
Principles of P–N junction detectors, Gordon M. Brown, Alan F. Clark, and Philip R. Pluta—19
The response of anisotropic defects in solids to stress, J. W. Corbett—521
A simple device for demonstrating the shear and twist associated with a screw dislocation, Edgar A. Pearlstein and John Weymouth—391
Some experiments on nuclear magnetic resonance, Bailey L. Donnally and Enrique Bernal G—779
Student measurement of Fermi energy by positron annihilation, John D. McGervey—713

Sound

Acoustic "Tuning" of Philharmonic Hall Lincoln Center, Chas. Williamson—895(A)
Book review: *Fundamentals of acoustics* by Lawrence E. Kinsler and Austin R. Frey; Carl E. Adams—812
Certain aspects of the acoustics of musical horns, F. J. Young—470(A)
A demonstration-experiment to determine the velocity of sound in air, Robert B. Collagan—743(A)
Improvements in an experiment on diffraction of light by sound, H. L. Armstrong—132
Improvements in an experiment on diffraction of light by sound, J. S. Morgan—735(L)
Interferometric studies of ultrasonic velocity and absorption in mixtures of gases, E. E. Adams, R. J. Ayres, and H. T. Scales—229(A)
Measurement of the velocity of sound in gases, H. J. Wintle—942
A method of measuring the sound wave-length in gases, Samuel S. Lestz—96
Musical composition by random process, Sharon Modrick—743(A)
Some striking reed horn experiments, R. C. Hitchcock—895(A)
What about hi-fi?, Antoine Leyn—895(A)

Space physics

Book review: *Careers in astronautics and rocketry*, Robert L. Weber—149
Book review: *The challenges of space* edited by Hugh Odishaw; Francis T. Worrell—811
Book review: *The Mars project* by Wernher von Braun; Thornton Page—633
Van Allen belt demonstration, Patrick O. Braden—459

Teacher training

Fermi questions, Philip Morrison—626(L)
The Orins science lecture demonstration program for high school science teachers, J. B. Christie and C. J. Craven—894(A)
Peace Corps Seeks Science Teachers—462
A teaching intern program in freshman physics, G. W. Ray and W. R. Rusk—72(A)
Upgrading college physics teachers in subject matter, Marsh W. White—894(A)

Testing: theory and techniques

How good should tests be?, Mario Iona—149(A)
An interesting correlation involving good grades and student habits, D. J. Prowse—460(L)
Try this examination. Louis R. Weber—149(A)

Units, dimensions, and terminology

Book review: *Elsevier's dictionary of general physics in six languages* compiled and arranged by W. E. Clason; W. P. Ganley—630
Book review: *Six language dictionary of electronics, automation and scientific instruments* compiled by A. F. Dorian; W. P. Ganley—630
Book review: *Supplement to the Elsevier dictionaries of electronics, nucleonics and telecommunication in six languages* compiled and arranged by W. E. Clason; W. P. Ganley—630
Dynamation, D. F. Holcomb and R. M. Cotts—26
Dynamation, J. A. Van den Akker—550(L)
Film review: *Change of scale*, Dale V. Ulrich—735
Film review: *Measuring large distances*, Richard E. Garrett—738
Formalised system of equations in electromagnetism, H. G. Venkates—153
Linear or nonlinear?, Harry E. Stockman—728
On the time rate of change of momentum, David Kubrin and Robert Kargon—461(L)
Save the slug, Roland A. Jalbert—625(L)
The slug? PTUI!, Hilbert Schenck, Jr.—626(L)

Waves

Book review: *Introduction to electromagnetic fields and waves* by Dale R. Corson and Paul Lorrain; F. W. Van Name, Jr.—556
Book review: *Shock waves in physics and chemistry* by J. M. Bradley, Raymond J. Emrich—224
Book review: *The theory of plasma waves* by Thomas Howard Stix; F. R. Scott—816
A classical analog for relativistic contraction, Lewis Epstein—913
A comment on teaching wave motion, D. Murray Alexander—229(A)
Improvements in an experiment on diffraction of light by sound, J. S. Morgan—735(L)
Interference pattern of beats, L. G. Hoxton—794
A laboratory linear analog for lattice dynamics, R. B. Runk, J. L. Stull, and O. L. Anderson—915
Measurement of the velocity of sound in gases, H. J. Wintle—942
Outline of a course in plasma physics, Sanborn C. Brown (committee chairman)—637

X-rays

Book review: *X-ray optics* by A. J. C. Wilson; C. H. Holbrow—893
Demonstration model of spherical projection for cubic crystals, Adolph E. Spakowski and Robert J. Bacigalupi—807
Determination of the characteristic temperature and the Debye–Waller factor by x-ray methods, T. O. Baldwin and C. W. Tompson—817(A)
A small angle x-ray scattering study of Thoria Sols, D. E. Andrews, J. E. Thomas, P. W. Schmidt—817(A)
